EDITORIAL

FastTrack publication

The aim of *Paediatric and Perinatal Drug Therapy* has always been to improve the management of drug therapy in paediatric patients of all ages. This is achieved by the dissemination of information in different aspects of paediatric therapeutics to healthcare professionals. Having originally started as an annual review, the journal is now a six monthly publication with original articles, reviews and abstracts from the conferences of the two societies associated with the journal, the Neonatal and Paediatric Pharmacists Group and the European Society for Developmental, Perinatal and Paediatric Pharmacology.

In order to facilitate the transfer of information especially that contained within original

articles, we are pleased to announce the introduction of a FastTrack publication. These articles will be accessible via the LibraPharm website, www.librapharm.com/paediatric.php. The FastTrack publication is identical to the subsequent printed version. The paper version of the journal will contain all articles published via the FastTrack process. These will be printed in chronological order in relation to the date that they have been accepted. We are confident that the introduction of FastTrack publication will be beneficial for the journal, its readers and, in the long-term, children.
